Humbaba

March 14, 2021

Vision

Humbaba swiftlty learns what needed to be developed!

- Anyone can quickly design complex systems
- Developers work just on interfaces
- Brains and interfaces can be bundled together

How?

We one shot learn any abstract sequence!

Humbaba learns 10k random nodes, corresponding to 70k sequences within 22 seconds

Scaling as Brain of Brains/Interfaces

- System learns any multidimensional sequence
- System can interact with any interface (protocol)
- System can interact with multiple "Brains"

System: Editor, App & Monitor

One can communicate with Humbaba via websockets

System: App Speech ↔ Text

Humbaba is integrated with a IOS supporting Speech ↔ Text
